

Work in a National Forest this summer!

Michigan State University is hiring several technicians to be part of a small team to install a tree seedling study, collect vegetation and soils data, and manage data. This includes tree planting, plot layout, plant identification, size measurements, and following survey protocols. The technicians will use GPS, tablets, and forestry and soils tools. The work environment is outdoors in forested areas with insects, ticks and varying temperatures. Work schedules are compact four 10-h day weeks Monday-Thursday.

Seeking Student Research Assistants

The work is related to the Desired Regeneration through Assisted Migration (DREAM) research project, a collaborative project between US Forest Service Northern Research Station (NRS) and Michigan State University. The technicians will work out of the NRS Office in Rhinelander, WI. A work vehicle is provided for travel to field sites. There may be limited overnight travel provided for certain duties of the research project.

Housing is not provided but spots are reserved for technicians to rent lodging at the University of Wisconsin Kemp Natural Resource Station. If interested, contact project leads.

To apply, please send a resume and cover letter to Barret Wessel (wesselba@msu.edu). Application review will begin on February 21st. Applications will continue to be accepted after this date, but for best consideration please apply by 2/21.
